Summary

Around 5 years of experience as a Software Engineer leveraging React.js, Java, Spring Boot, XCode, Flutter, React Native, and Android Studio to develop and deploy robust, scalable, and user-centric applications across mobile, and backend platforms. Developed cross-platform mobile applications using Dart and Flutter, reducing development time and ensuring consistent performance on iOS and Android. Skilled in JUnit testing framework to identify and fix bugs early in the development cycle, improving overall software quality.

Experience

Goldman Sachs Group, CA | Software Engineer

Jan 2024 – Present

- Leveraged React's caching mechanisms to optimize data fetching for frequently accessed data from Java APIs, resulting in a 25% decrease in average page load time.
- Implemented advanced state management solutions, such as Provider and Riverpod, in Dart applications, leading to a 20% reduction in runtime errors and improved app stability.
- Utilized Dart DevTools for performance profiling and debugging, resolving 90% of performance bottlenecks and achieving smoother app experiences.
- Developed scalable and feature-rich applications using Flutter and Dart, achieving a 20% increase in user engagement through polished UI/UX and integrated real-time data synchronization with Firebase to ensure 99% data accuracy, while enhancing app performance through structured state management techniques such as Provider and Bloc.
- Strengthened application deployment by 50% by implementing robust CI/CD pipelines leveraging Kubernetes and industry-leading tools like Jenkins and GitLab CI.
- Accelerated software delivery by implementing CI/CD pipelines using AWS CodePipeline, CodeBuild, and CodeDeploy, resulting in a 20% increase in deployment frequency.

Kpit Technologies, India | Junior Software Engineer

Jan 2019 – Jul 2022

- Optimized Dart-based mobile applications with RESTful APIs and GraphQL endpoints, ensuring seamless data synchronization and a 15% boost in API response efficiency.
- Integrated third-party services such as Firebase, and payment gateways into Flutter apps, enhancing user experience.
- Directed sprint planning and task management using Jira and Bitbucket, advancing J2EE development with design patterns and integrating SOAP API and REST APIs, promoting excellence in software development.
- Accomplished comprehensive unit and integration tests using Java Spring Boot (JUnit), automating backend API calls to enhance reliability, and wrote 20+ automated tests for API sanity testing.
- Connected Flutter applications to Azure SQL Database and Cosmos DB, optimizing data retrieval and storage, resulting in a 35% improvement in query performance.
- Designed and developed APIs leveraging microservice architecture, utilizing Spring Boot for efficient development and JMS for asynchronous communication with Kafka as the message broker.
- Enhanced and managed the CI/CD pipeline using Jenkins and Docker, implementing automated testing and deployment within an agile development framework for seamless backend changes integration and delivery.

Skills & Certification

Methodologies and Languages: SDLC, Agile/Scrum, C, C++, Java, Dart, Python, JavaScript, SQL, NoSQL

Front End: HTML5, CSS3, Bootstrap5, jQuery, Ajax, JSON, XML, React.js

Backend: Spring Boot, Spring MVC, Spring Data JPA, RxJava, Node.js,

Cloud: AWS (EC2, SQS, SNS, Elastic Beanstalk, Lambda, Code Deploy, and CloudWatch), Azure

Mobile Development: XCode, VSCode, Figma, Flutter, React Native, Android Studio

Testing and Database: JUnit, Postman, Jira, Mockito, MySQL, PostgreSQL, MongoDB, Oracle, Firebase

CI/CD and DevOps Tools: Git, GitHub, Jenkins, Docker, Kubernetes, SOAP UI, Kafka, RabbitMQ, GraphQL

Education

Masters of Science in Computer Science | California State University, Los Angeles, CA

GPA: 3.78/4

Bachelor of Science in Computer Engineering | Gujarat Technological University, India

GPA: 3.5/4

Projects

Home Automation| Flutter, dart, Xcode, Android Studio

Mar 2021 – Jul 2022

- Built a cross-platform home automation app using Flutter and Dart, achieving 95% seamless control across devices and reducing app load times by 20% through efficient local storage and integration of the REST API.
- Improved backend performance with Java services and Spring Boot, optimizing event processing and reducing latency by 30% while ensuring a scalable modular architecture for future development

Smart Support Farming System | Flutter, Dart, Firebase Firestore, IoT Sensors

Jul 2021 – Jul 2022

- Built a cross-platform app using Flutter and Dart, integrating IoT sensors to monitor real-time soil and environmental data, increasing farm productivity by 35%.
- Optimized data synchronization with Firebase Firestore, achieving 99% uptime and automating irrigation, reducing water usage by 30% and manual labor by 40%.
